

Parking Lot Management System

Member 1

1. Park / Exit Vehicle

- One combined feature for both directions of the garage.
- Parking adds a car and gives it a slot number (shows "lot full" if there's no space).
- Exiting only works if that car is the last one parked (on top).
- If another car is blocking it, tell the user which car must leave first.

2. Search Vehicle by ID

- Finds a car using its ID.
- Shows which slot it is in.
- Shows how many cars are parked in front of it.

Member 2

3. Emergency Priority Exit

- Lets a blocked car leave immediately, even if it isn't on top.
- Temporarily moves the blocking cars aside.
- Removes the requested car, then puts the other cars back in the same order.

4. Exit Fee Calculation

- Looks up a parked vehicle by ID.
- Asks how many minutes it was parked.
- Multiplies minutes by a fixed rate to get the fee.

Member 3

5. Total Revenue Report

- Keeps a running total of every fee that has been calculated.
- Shows the total money collected so far.

6. Capacity Report

- Shows total parking spaces.
- Shows how many are used and how many are free.
- Says whether the lot is full or has space.
